SPRING 2025

Use Cases

Customized Meal Planning & AI-Powered Adjustments

Persona: Emma (Dog Owner)

Pain Point: Struggles to select the right food for her dog's dietary needs.

Scenario: Inputs dog's details, AI customizes a meal plan, and adjusts over time based on health data.

Automated Restocking & Smart Delivery

Persona: Anjana Nair (Busy Professional with a Dog)

Pain Point: Forgetting to restock pet food, leading to last-minute purchases.

Scenario: AI tracks food consumption, sends reminders, and automates delivery.

First-Time Pet Owners & Guided Onboarding

Persona: Lily (New Dog Owner)

Pain Point: Overwhelmed by conflicting pet nutrition advice.

Scenario: Interactive onboarding, AI-driven recommendations, and access to vet consultations.

Market size

The market sizing research for pet dog-related services in Boston estimates a Total Addressable Market (TAM) of \$62.8M – \$104.7M, based on 83K dog-owning households spending \$1,500–\$2,500 annually. With 55% market penetration (41,883 households) and a 15% commission model, the projected annual revenue is:

\$9.4M – \$15.7M

Risk and Dependency

	1	2	3	4	5
Risk Category	Privacy & Data Security	Legal & Intellectual Property Risks	Intellectual Property Theft & Replication	Privacy & Data Security	Privacy & Data Security
Description	Handling pet-related medical and dietary data poses risks of breaches, unauthorized access, or misuse, affecting user trust.	AI-driven pet analytics and wearable tech may lead to patent disputes or IP conflicts, resulting in legal challenges.	Unauthorized copying of AI algorithms, meal plans, or consultation frameworks can impact market position.	AI-based recommendations, veterinary consultations, and meal plans require seamless functionality, as failures impact user experience.	Dependence on external vendors for pet food and veterinary services risks supply chain issues and delays.
Mitigation	Use encryption, conduct security audits, follow data protection laws, and restrict sensitive data storage.	Conduct IP research, seek legal counsel, and develop proprietary tech for compliance and competitive advantage.	Implement encryption, watermarking, and access controls; secure patents to protect assets.	Perform rigorous testing, use scalable cloud infrastructure, and establish backup and recovery plans.	Diversify suppliers, secure long-term agreements, and maintain inventory reserves for consistency.
